

## **Castle Chemicals cleaners and sanitisers for use in GMO sensitive food manufacturing environments.**

Castle Chemicals manufacture food grade cleaning products for use as; CIP (Clean In Place), cleaners, sanitisers, (or combination) cleaner sanitiser applications. Whilst not direct foodstuffs or additives, these product could be viewed as 'potential components of a processing aid'. (FSANZ Food Standards Code 1.2.3). When used as specified in the product Technical bulletin.

The importance of the use of suitable raw materials and actives for these products in the food industry cannot be overstated; careful selection of food compatible specification materials is forefront in the formulation of these products.

Further to this; consideration is given to the specific non- inclusion of known GMO materials. This consideration extends to the supply of raw materials to formulate these products.

With this due diligence we can therefore state that our products do not knowingly contain GMO materials.

For and on behalf of Castle Chemicals

**Matt McDonald BSc. (Dist)**  
**Chief Chemist / Technical Manager.**
