

Urinal Screens

Helpful Hint:
 Rotate your fragrances!
 Fragrance fatigue ("I can't smell it anymore!") is a real physiological response to constant exposure to one fragrance. For best results, make sure you change fragrances every month.

Open design, increased height, and thus does not splash.

Red Cinnamon
 #WDS10AC

Pink Strawberry
 #WDS10CM

Green Evergreen
 #WDS10HM

Orange Mango
 #WDS10MG

Yellow Citrus
 #WDS12CIT

Urinals are the fastest way to move large volumes of urine from the human body into the sewerage system however, with sometimes up to 20 men using the washroom at once this can lead to very unpleasant smells reminding your customers that this is a dirty establishment.

These odours are mainly the result of a build up of uric salt scale and a biofilm of bad bacteria. The buildup reduces the flow through your pipes over time.

New urinals and pipes don't have this buildup and that is why they smell clean for the first two to three months.

To maintain your urinals and pipes as new, you need to ensure that good friendly optimised bacteria is in your pipes continually going to work and breaking down the biofilm and uric salts allowing all the bad bacteria, and smells to flow quickly to their destination.
